Methodology

The analysis in this report is based on results of a survey conducted from Friday, August 23rd to Sunday, August 25th, 2024, among a sample of 929 Registered Voters, 18 years of age or older, living in The US. The survey was conducted with IVR, and an online panel to complete the survey. The survey gave respondents the option to complete the survey in English and Spanish. The survey is intended to represent the voting population in The US. Weights are applied for Gender, Race, Education and Past vote. Party ID is determined by asking which party each respondent most identifies with, as some states do not have voter registration by party. All voters are asked how likely they are to vote, and the voters who say they are most likely to vote are added to the Likely Voter screen.

Since the poll was partially completed online, a margin of error cannot be assigned to the poll, but a poll of this size would have a margin of error of +/- 3.2% at the 95% confidence level. Margins of error are higher in each subsample.
